Safe Use and Daily Inspections

All Power Climber hoists have Operator's Manuals included. It is not only important that each operator is trained by a competent person before using any particular hoist, in some areas of the country, it is the law! Hoists should only be used by trained authorized personnel.

The Operator's Manual is the first place to start when providing your customers with this instruction. Power Climber also has videos covering the first use and safe operation of the PC1 hoist and the Astro 85 series hoists to assist you in teaching larger groups.

Inside of the Operator's Manuals is a section titled "Daily Test Requirements". These test requirements are geared so that every operator can insure that their hoist is safe to operate. These tests must be performed at the start of each work shift. If the hoist fails any of the tests, the operators must not use the equipment until it has been repaired.

Contact Power Climber if you need assistance finding this information or would like to purchase videos on this topic.
